SERVICE MANUAL

COLOR VIDEO CAMERA

TK-C600/TK-C601EG

TK-C600
(Lens is optional.)

TK-C601
(Lens is optional.)

SPECIFICATIONS

Image sensor	: Color Video Camera	Video S/N ratio	: 46 dB
Signal system TK-C600U	: Based on NTSC standard	Minimum required illumination	: 1.5 lx (F1.2)
TK-C600E/601EG	: Based on PAL standard	Switching functions	: AGC (ON/OFF), BLC (ON/OFF, Sync (INT/LL), White balance (Auto/Manu)
Image sensor	: Interline-transfer CCD (with complementary color filter)	Adjusting functions	: Flange-back, Manual white balance (1 axes: R-B), V phase, IRIS LEVEL Control
Number of effective pixels		Lens mount	: C/CS mount
TK-C600U	: 250,000 (512 (H) × 492 (V))	Power supply TK-C600U	: 24 V AC, 50/60 Hz
TK-C600E/601EG	: 300,000 (512 (H) × 582 (V))	TK-C600E	: 24 V AC, 50/60 Hz, 12 V DC
Image size	: 1/3 inch (pickup area: 4.8 (H) × 3.6 (V) mm)	TK-C601EG	: 220 V to 240 V AC 50/60 Hz
Synchronization method		Power consumption	
TK-C600U	: Internal and line lock synchronization (60-Hz regions only)	TK-C600U	: 4 W
TK-C600E/601EG	: Internal and line lock synchronization (50-Hz regions only)	TK-C600E	: 4 W
Scanning lines		TK-C601EG	: 4.5 W
TK-C600U	: 525 lines, 2:1 interlaced	Operating temperature range	: -10°C to +50°C (Recommended temperature range: 0°C to +40°C)
TK-C600E/601EG	: 625 lines, 2:1 interlaced	Weight	
Scanning frequency		TK-C600U	: 470 g
TK-C600U	: (H)15.734 kHz (V)59.94 Hz	TK-C600E	: 470 g
TK-C600E/601EG	: (H)15.625 kHz (V)50.0 Hz	TK-C601EG	: 800 g
Resolution	: 330 TV lines (horizontal)	Provided accessory	: 4P plug × 1
Video output	: Composite video signal 1Vp-p, 75 Ω, unbalanced		

Design and specifications are subject to change without notice.

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the  symbol and shaded (■) parts are critical for safety.

Replace only with specified part numbers.

Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.

Caution for continued protection against fire hazard.

Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

1) Wires covered with PVC tubing

2) Double insulated wires

3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:

1) Insulation Tape

3) Spacers

5) Barrier

2) PVC tubing

4) Insulation sheets for transistors

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

Fig. 1

7. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) **Connector part number :** E03830-001

2) **Required tool :** Connector crimping tool of the proper type which will not damage insulated parts.

3) **Replacement procedure**

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

Fig. 6

(5) Check the four points noted in Fig. 7.

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	$Z \leq 0.1 \text{ ohm}$
Europe & Australia	$Z \leq 0.5 \text{ ohm}$

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	$R \geq 1 \text{ M}\Omega / 500 \text{ V DC}$	AC 1 kV 1 minute	$d, d' \geq 3 \text{ mm}$
100 to 240 V			AC 1.5 kV 1 minute	$d, d' \geq 4 \text{ mm}$
110 to 130 V	USA & Canada	—	AC 900 V 1 minute	$d, d' \geq 3.2 \text{ mm}$
110 to 130 V 200 to 240 V	Europe & Australia	$R \geq 10 \text{ M}\Omega / 500 \text{ V DC}$	AC 3 kV 1 minute (Class II) AC 1.5 kV 1 minute (Class I)	$d \geq 4 \text{ mm}$ $d' \geq 8 \text{ mm}$ (Power cord) $d' \geq 6 \text{ mm}$ (Primary wire)

Table 1 Specifications for each region

AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan	$1 \text{ k}\Omega$	$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada	$0.15 \mu\text{F}$ capacitor in series with $1.5 \text{ k}\Omega$	$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe & Australia	$2 \text{ k}\Omega$	$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Antenna earth terminals
		$50 \text{ k}\Omega$	$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Other terminals

Table 2 Leakage current specifications for each region

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

INSTRUCTIONS (For U Version)

JVC

TK-C600

COLOR VIDEO CAMERA

The lens is optional

For Customer Use:

Enter below the Serial No. which is located on the top of the body. Retain this information for future reference.

Model No. TK-C600

Serial No. _____

INSTRUCTIONS (For E Version)

JVC

TK-C601

COLOR VIDEO CAMERA

The lens is optional

CAUTION
RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK,
DO NOT REMOVE COVER (OR BACK).
NO USER SERVICEABLE PARTS INSIDE.
REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equi-lateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Information for USA

This device complies with Part 15 of the FCC Rules. Changes or modifications not approved by JVC could void the user's authority to operate the equipment.

Due to design modification, data given in this instruction book are subject to possible change without prior notice.

WARNING:
TO PREVENT FIRE OR SHOCK HAZARD,
DO NOT EXPOSE THIS UNIT TO RAIN OR
MOISTURE.

AVERTISSEMENT:
POUR EVITER LES RISQUES D'INCENDIE
OU D'ELECTROCUTION, NE PAS EXPOSER
L'APPAREIL A L'HUMIDITE OU A LA PLUIE.

INFORMATION (FOR CANADA) RENSEIGNEMENT (POUR CANADA)

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus as set out in the interference-causing equipment standard entitled "Digital Apparatus", ICES-003 of the Department of Communications.

Cet appareil numérique respecte les limites de bruits radioélectriques applicables aux appareils numériques de Classe B prescrites dans la norme sur le matériel brouilleur : "Appareils Numériques", NMB-003 édictée par le ministre des Communications.

WARNING:
TO PREVENT FIRE OR SHOCK HAZARD,
DO NOT EXPOSE THIS UNIT TO RAIN OR
MOISTURE.

AVERTISSEMENT:
POUR EVITER LES RISQUES D'INCENDIE
OU D'ELECTROCUTION, NE PAS EXPOSER
L'APPAREIL A L'HUMIDITE OU A LA PLUIE.

Due to design modification, data given in this instruction book are subject to possible change without prior notice.

WARNING-THIS APPLIANCE MUST BE EARTHED IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

GREEN-AND-YELLOW:	EARTH
BLUE:	NEUTRAL
BROWN:	LIVE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows. The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked with the letter E or by the safety earth symbol \perp or coloured GREEN or GREEN-AND-YELLOW. The wire which is coloured BLUE must be connected to the terminal which is marked with the letter N or coloured BLACK. The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

Thank you for purchasing the JVC color video camera. To obtain the best results from your new camera, read this instructions carefully before use; retain the manual for future reference.

FEATURES	2
PRECAUTIONS	2
CONTROLS, CONNECTORS AND INDICATORS	3
CONNECTION	5
LENS	6
SPECIFICATIONS	9

FEATURES

- 1/3" approx. 270,000 pixels (approx. 250,000 pixels effective) IT-CCD for clear pictures without image lag or geometrical distortion. High-sensitivity design for a low-light sensitivity of 1.5 lx (F1.2).
- TTL auto tracking white balance adjustment and manual override (1 axis: R-B).
- AGC function to automatically increase camera's sensitivity when the level of ambient light drops.
- Since the camera uses 24V AC, it can be installed and built into a system easily.
- Internal and line lock synchronization (60-Hz regions only) can be selected by switch.
- The automatic electronic shutter adjusts its speed automatically to provide correct exposure even if a manual iris lens is used.

- The built-in backlight compensation function improves the image quality for backlighting subjects.
- The back focus adjustment function allows easy adjustment and installation.
- C-mount or CS-mount lens can be attached to the camera by using the lens mount adjustable function.

PRECAUTIONS

- Since this camera contains an AGC circuit, the sensitivity increases automatically in dark places. It is not a failure when the image looks grainy.
- If a zoom lens is used, check the back focus before mounting the camera. This also applies to lens ALC and LEVEL. (See the instructions for details.)
- If a high-intensity object (such as a lamp) is shot, the image on the screen may have vertical lines (smear) or blur (blooming) at its periphery (especially in AES mode). This is a characteristic of the CCD, and is not a defect.
- If an EE lens is used, set the electronic automatic shutter switch (AES) to OFF. If set to ON, flickering may occur. If a manual iris lens is used, set the AES to ON.
- The automatic tracking system may not function properly when shooting with non-standard lighting or lighting with a color temperature which exceeds the capability of the camera. In such a case, set to the "MANU" position.
- When used in hot places, vertical lines may appear on the screen of this camera. This is a characteristic of the CCD and not a failure of the camera.
- If the camera subject is a single solid colour (other than white), the auto white circuit will normally attempt to change this colour to white. In the case of this camera, if it cannot make a correct prediction, the previous white balance setting will be maintained until the subject colours become more varied.

Thank you for purchasing the JVC color video camera. To obtain the best results from your new camera, read this instructions carefully before use; retain the manual for future reference.

- If the camera subject is a single solid colour (other than white), the auto white circuit will normally attempt to change this colour to white. In the case of this camera, if it cannot make a correct prediction, the previous white balance setting will be maintained until the subject colours become more varied.

CONTROLS, CONNECTORS AND INDICATORS

① Camera mounting screw holes (1/4")

These screw holes are used to install the camera on a mount or PAN/TILT UNIT. Use either of the two holes according to the situation.

② Camera mounting bracket fixing screws (three)

③ Camera mounting bracket

The camera mounting bracket is mounted on the bottom of the camera at the factory. It can be installed on the top of the camera if necessary. Fit the mounting bracket on the top of the camera head with the three screws ②.

④ Lens mount

This mount is used to install a C-mount lens (1/3, 1/2, 2/3, 1 inch) or CS-mount lens (1/2, 1/3 inch)

⑤ [BF LOCK] Back focus locking screw

This screw locks the back focus adjustment mechanism.

⑥ Back focus adjustment ring

This ring is used to adjust the back focus and change the lens mount method. Loosen screw ⑤ to turn the ring, and tighten the screw after adjustment.

⑦ [DC IRIS] DC iris connector

Connect an auto-iris lens that does not contain an EE amplifier. If the lens cable has a different type of plug, use the supplied 4-pin plug.

⑧ [LEVEL] Sensitivity adjustment volume

Adjust the brightness of the image when the DC iris connector ⑦ is used.

Monitor screen	LEVEL turning direction
Too bright	Counterclockwise (Towards L)
Too dark	Clockwise (Towards H)

CONTROLS, CONNECTORS AND INDICATORS

① Camera mounting screw holes (1/4")

These screw holes are used to install the camera on a mount or PAN/TILT UNIT. Use either of the two holes according to the situation.

② Camera mounting bracket fixing screws (three)

③ Camera mounting bracket

The camera mounting bracket is mounted on the top of the camera at the factory. It can be installed on the bottom of the camera if necessary. Fit the mounting bracket on the bottom of the camera head with the three screws ②.

④ Lens mount

This mount is used to install a C-mount lens (1/3, 1/2, 2/3, 1 inch) or CS-mount lens (1/2, 1/3 inch)

⑤ [BF LOCK] Back focus locking screw

This screw locks the back focus adjustment mechanism.

⑥ Back focus adjustment ring

This ring is used to adjust the back focus and change the lens mount method. Loosen screw ⑤ to turn the ring, and tighten the screw after adjustment.

⑦ [DC IRIS] DC iris connector

Connect an auto-iris lens that does not contain an EE amplifier. If the lens cable has a different type of plug, use the 4-pin plug supplied.

⑧ [LEVEL] Sensitivity adjustment volume

Adjust the brightness of the image when the DC iris connector ⑦ is used.

Monitor screen	LEVEL turning direction
Too bright	Counterclockwise (Towards L)
Too dark	Clockwise (Towards H)

- 9 [AC24V-] Power input terminal**
Connect the 24V AC power supply.
- 10 [VIDEO IRIS] Video iris terminal**
Connected to an auto-iris lens containing an EE amplifier.
- 11 RS-232C Interface Connector**
This connector is used for service.
- 12 [POWER] Power lamp**
Lights when the power is on.
- 13 [VIDEO OUT] Video signal output connector**
Outputs the video signal from the camera.
Connect to a video monitor, etc. (75Ω)
- 14 [WHT. BAL] White balance select switch**
This is used for changing the setting of the white balance.
MANU: Manual adjustment is possible.
AUTO: Accepts different types of lighting (2,850K – 7,000K) using an automatic tracking system.
- 15 [AGC] Automatic Gain Control Switch**
This automatically increases the camera's sensitivity when the level of ambient light drops.
ON: AGC is activated.
OFF: AGC is not activated.

- 16 [BLC] Backlight compensation switch**
This switch improves an image that is darkened because of backlighting.
Set this switch to ON for backlight subjects.
- 17 [AES] Automatic Electronic Shutter switch**
If this switch is set to "ON" when the manual iris lens is used, the shutter speed varies according to the brightness of the object, and the brightness of the image is automatically adjusted.
If the aperture is fixed or if an EE lens is used, set this switch to OFF.

NOTE

- Hunting may occur at a certain object brightness due to the mechanism of the AES circuit, but this is not a failure.

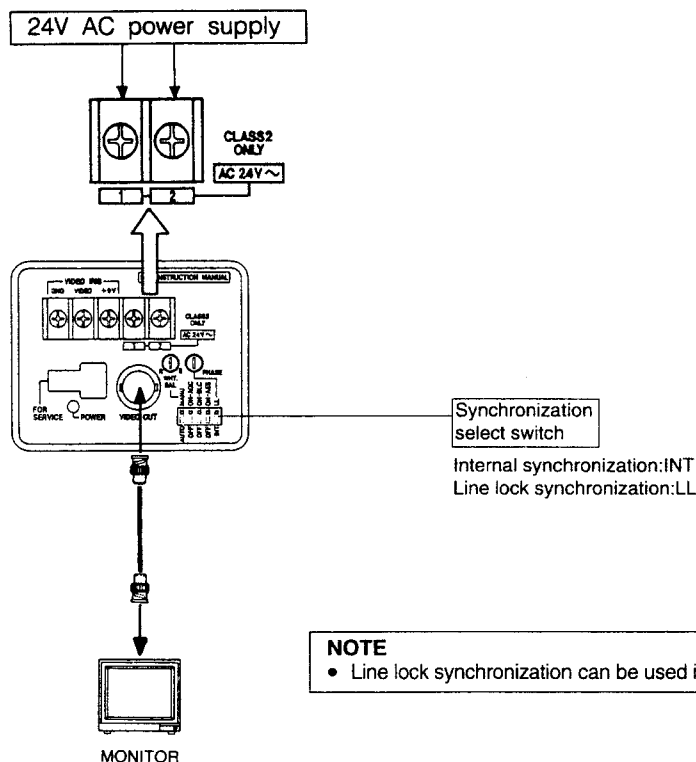

- 18 [PHASE] Line lock synchronization phase adjustment**
Used to adjust the phase when the synchronization select switch **19** is set to "LL".
Adjust this volume so that the vertical phase of the camera matches the vertical phase of another camera (or system) with a multi-channel oscilloscope. (If the phases do not match using this method, reverse the polarities of the 24V AC power to the camera, then adjust again.)
- 19 [Synchronization select switch]**
INT: Set the switch to this position to use the internal sync signal (SYNC or VS).
The camera operates in synchronization with the internal sync signal.
LL: Set the switch to this position to use the frequency of the 24 AC power supply for synchronization (in 60-Hz power regions only).
- 20 [White balance adjustment controls]**
When the white balance select switch **14** is set to "MANU" the white balance can be adjusted manually.
Turn to the "B" side to decrease the amount of red.
Turn to the "R" side to decrease the amount of blue.

- 10 [VIDEO IRIS] Video iris terminal**
Connected to an audio-iris lens containing an EE amplifier.
- 11 RS-232C Interface Connector**
This connector is used for service.
- 12 [POWER] Power lamp**
Lights when the power is on.
- 13 [VIDEO OUT] Video signal output connector**
Outputs the video signal from the camera.
Connect to a video monitor, etc. (75Ω)
- 14 [WHT. BAL] White balance select switch**
This is used for changing the setting of the white balance
MANU: Manual adjustment is possible.
AUTO: Accepts different types of lighting (2,850K – 7,000K) using an automatic tracking system.
- 15 [AGC] Automatic Gain Control Switch**
This automatically increases the camera's sensitivity when the level of ambient light drops.
ON: AGC is activated.
OFF: AGC is not activated.
- 16 [BLC] Backlight compensation switch**
This switch improves an image that is darkened because of backlighting.
Set this switch to ON for backlight subjects.
- 17 [AES] Automatic Electronic Shutter switch**
If this switch is set to "ON" when the manual iris lens is used, the shutter speed varies according to the brightness of the object, and the brightness of the image is automatically adjusted.
If the aperture is fixed or if an EE lens is used, set this switch to OFF.

CONNECTION

• Connection examples

NOTE

- Line lock synchronization can be used in 60 Hz power regions only

NOTE

- Hunting may occur at a certain object brightness due to the mechanism of the AES circuit, but this is not a failure.

18 Synchronization select switch

INT: Set the switch to this position to use the internal sync signal (SYNC or VS). The camera operates in synchronization with the internal sync signal.

LL: Set the switch to this position to use the frequency of the AC power supply for synchronization (in 50-Hz power regions only).

19 [PHASE] Line lock synchronization phase adjustment

Used to adjust the phase when the synchronization select switch 18 is set to "LL".

Adjust this volume so that the vertical phase of the camera matches the vertical phase of another camera (or system) with a multi-channel oscilloscope. (If the phases do not match using this method, reverse the polarities of the AC power to the camera, then adjust again.)

20 White balance adjustment controls

When the white balance select switch 20 is set to "MANU" the white balance can be adjusted manually.

Turn to the "B" side to decrease the amount of red.
Turn to the "R" side to decrease the amount of blue.

21 Power cord (TK-C601 only)

Supply power from an AC outlet (220 to 240 V)

CONNECTION

• Connection examples

NOTE

- Line lock synchronization can be used in 50 Hz power regions only

LENS

Mounting a lens

- Before mounting a lens, check whether it is a C-mount or CS-mount one.
This camera has a CS-mount. (Fig. 1-1) If a C-mount lens is used, loosen back focus locking screw (Page 3 ⑤), then turn the back focus adjustment ring (Page 3 ⑥) in the direction of the arrow in the Fig. 1-1 to change the mounting method. (Fig. 1-2 shows the state for the C-mount.)

CAUTIONS

- The ring cannot be turned with fingers from a certain point. Use a screwdriver or any other tool with a thin tip to turn it further. (Fig. 1-3)
- Dimension L of the lens shown in the illustration below must be as shown in the table below. If L exceeds the value in the table, it may damage the inside of the camera or correct mounting may be impossible; never use such lenses. Do not attach the C-mount lens when using a CS-mount.

Lens	Flange back	Dimension L
C mount lens	17.526 mm	10 mm or less
CS mount lens	12.5 mm	5.5 mm or less

- Mount the lens on the camera by turning the lens clockwise. Adjust its position. (Fig. 2)
- If the lens has an auto-iris mechanism, connect the lens cable.
 - If the lens does not contain an EE amplifier, connect the cable to the DC IRIS connector on the side. If the lens cable has a different type of plug, use the 4-pin plug supplied. (Fig. 2-1)
 - If the lens contains an EE amplifier, connect the cable to the VIDEO IRIS terminal on the rear. (Fig. 2-2)

Fig. 1

Fig. 2

Fig. 2-1

Connector pin layout (DC IRIS)

Fig. 2-2

LENS

Mounting a lens

- Before mounting a lens, check whether it is a C-mount or CS-mount one.
This camera has a CS-mount. (Fig. 1-1) If a C-mount lens is used, loosen back focus locking screw (Page 3 ⑤), then turn the back focus adjustment ring (Page 3 ⑥) in the direction of the arrow in the Fig. 1-1 to change the mounting method. (Fig. 1-2 shows the state for the C-mount.)

CAUTIONS

- The ring cannot be turned with fingers from a certain point. Use a screwdriver or any other tool with a thin tip to turn it further. (Fig. 1-3)
- Dimension L of the lens shown in the illustration below must be as shown in the table below. If L exceeds the value in the table, it may damage the inside of the camera or correct mounting may be impossible; never use such lenses. Do not attach the C-mount lens when using a CS-mount.

Lens	Flange back	Dimension L
C mount lens	17.526 mm	10 mm or less
CS mount lens	12.5 mm	5.5 mm or less

- Mount the lens on the camera by turning the lens clockwise. Adjust its position. (Fig. 2)
- If the lens has an auto-iris mechanism, connect the lens cable.
 - If the lens does not contain an EE amplifier, connect the cable to the DC IRIS connector on the side. If the lens cable has a different type of plug, use the 4-pin plug supplied. (Fig. 2-1)
 - If the lens contains an EE amplifier, connect the cable to the VIDEO IRIS terminal on the rear. (Fig. 2-2)

Fig. 1

Fig. 2

Fig. 2-1

Connector pin layout (DC IRIS)

Fig. 2-2

- Connect the camera according to the connection method, turn it on, display an image on the monitor, and check the image. The camera has been factory-adjusted to the widest range, but it may need to be adjusted according to the object conditions or combination of lenses. If the image is unnatural, adjust it as follows:

- **LEVEL adjustment**

Monitor screen	LEVEL turning direction
Too bright	Counterclockwise (Toward L)
Too dark	Clockwise (Toward H)

- **ALC adjustment**

Monitor screen	ALC turning direction
Part (high-intensity part) of the screen halates.	Clockwise (Toward Pk)
Other part of screen (except high-intensity part) darkens.	Counterclockwise (Toward Av)

NOTE: If the sensitivity adjustment [LEVEL] is turned excessively to L, the sensitivity increases because of the AGC function of the camera, and the image looks grainy.

- Connect the camera according to the connection method, turn it on, display an image on the monitor, and check the image. The camera has been factory-adjusted to the best position, but it may need to be adjusted according to the object conditions or combination of lenses. If the image is unnatural, adjust it as follows:

- **LEVEL adjustment**

Monitor screen	LEVEL turning direction
Too bright	Counterclockwise (Toward L)
Too dark	Clockwise (Toward H)

- **ALC adjustment**

Monitor screen	ALC turning direction
Part (high-intensity part) of the screen halates.	Clockwise (Toward Pk)
Other part of screen (except high-intensity part) darkens.	Counterclockwise (Toward Av)

NOTE: If the sensitivity adjustment [LEVEL] is turned excessively to L, the sensitivity increases because of the AGC function of the camera, and the image looks grainy.

• Back focus adjustment

The back focus has been factory-adjusted to the best point for CS-mount lens, but it may need to be re-adjusted if the mount is changed to the C-mount or if a different lens is used. If required, adjust it as follows:

With a fixed-focus lens

If the focus can not be adjusted correctly by rotating the lens focus ring, adjust the back focus as follows.

1. Loosen the back focus securing screw by turning it counterclockwise (↺) with a screwdriver.
2. Turn the back focus adjustment ring to focus at the best point.
3. Tighten the back focus securing screw by turning it clockwise (↻).

• Installing the EE cable

If the cable is too long, arrange it in the camera mounting bracket as shown below.

Opening/closing the cover

• Opening

• Closing

With a zoom lens

If the image is out of focus when zooming (wide-angle - telephoto), adjust the camera as follows:

- ① Shoot a comparatively dark scene with thin lines about three meters away from the camera.
- ② Set the lens to the maximum telephoto position, and adjust the lens focus.
- ③ Set the lens to the maximum wide-angle position, and adjust the back focus.
- ④ Repeat steps ② and ③ two or three times.

Arranging the iris cable (example)

• Threading

• Straight feeding

• Back focus adjustment

The back focus has been factory-adjusted to the best point for CS-mount lens, but it may need to be re-adjusted if the mount is changed to the C-mount or if a different lens is used. If required, adjust it as follows:

With a fixed-focus lens

If the focus can not be adjusted correctly by rotating the lens focus ring, adjust the back focus as follows.

1. Loosen the back focus locking screw by turning it counterclockwise (↺) with a screwdriver.
2. Turn the back focus adjustment ring to focus at the best point.
3. Tighten the back focus locking screw by turning it clockwise (↻).

• Installing the EE cable

If the cable is too long, arrange it in the camera mounting bracket as shown below.

[TK-C600U] SPECIFICATIONS

Type	: Color Video Camera
Signal system	: Based on NTSC standard
Image sensor	: Interline-transfer CCD (with complementary color filter)
Number of effective pixels	: 250,000 (512 (H) × 492 (V))
Image size	: 1/3 inch (pickup area: 4.8(H) × 3.6(V) mm)
Synchronization method	: Internal, and line lock synchronization (60-Hz regions only)
Scanning lines	: 525 lines, 2:1 interlaced
Scanning frequency	: (H) 15.734 kHz (V) 59.94 Hz
Resolution	: 330 TV lines (horizontal)
Video output	: Composite video signal 1V(p-p), 75Ω, unbalanced
Video S/N ratio	: 46 dB
Minimum required illumination	: 1.5 lx (F1.2)
Switching functions	: AGC (ON/OFF), BLC (ON/OFF), Sync (INT/LL), White balance (Auto/Manu)
Adjusting functions	: Flange-back, Manual white balance (1 axis: R-B), V phase, IRIS LEVEL Control
Lens mount	: C/CS mount
Power supply	: 24V AC, 50/60 Hz
Power consumption	: 4 W
Operating temperature range	: -10°C to +50°C (Recommended temperature range: 0°C to +40°C)
Weight	: 470 g
Provided accessory	: 4P Plug × 1

Dimensions (mm)

Design and specifications are subject to change without notice.

[TK-C601EG] SPECIFICATIONS

Type	: Color Video Camera	Power supply	: 220 V to 240 V AC 50/60 Hz
Signal system	: Based on PAL standard	Power consumption	: 4.5 W
Image sensor	: Interline-transfer CCD (with complementary color filter)	Operating temperature range	: -10°C to +50°C (Recommended temperature range: 0°C to +40°C)
Number of effective pixels	: 300,000 (512 (H) × 582 (V)) (pickup area: 4.8(H) × 3.6(V) mm)	Weight	: 800 g
Image size	: 1/3 inch	Provided accessory	: 4P Plug × 1
Synchronization method	: Internal, and line lock synchro- nization (50-Hz regions only)		
Scanning lines	: 625 lines, 2:1 interlaced		
Scanning frequency	: (H) 15.625 kHz (V) 50.0 Hz		
Resolution	: 330 TV lines (horizontal)		
Video output	: Composite video signal 1Vp-p, 75Ω, unbalanced		
Video S/N ratio	: 46 dB

SECTION 1 DISASSEMBLY

1.1 FUSE REPLACEMENT (TK-C600)

Before replacing a fuse, the reason why it blew should be investigated to prevent trouble from spreading. The malfunction should be repaired before replacing the fuse.

1. Detach the top cover, the rear panel and the bottom cover according to "1.2 REMOVAL OF TOP COVER", "1.3 REMOVAL OF REAR PANEL" and "1.4 REMOVAL OF BOTTOM COVER".
2. Detach the chassis and boards according to "1.5 REMOVAL OF BOARDS".
3. There is the fuse F101 on the MOTHER BOARD.

Fig. 1-1

For the safety and protection of the unit, replace only with fuse having specified part numbers.

	Part Number	
	U version	E version
⚠ F101	QMF51U1-1R0 1 A 125 A	QMF51A2-1R0 T1 A 250 V

1.2 REMOVAL OF TOP COVER

Remove two screws ① and a screw ②, and then detach the top cover ④.

Fig. 1-2

1.3 REMOVAL OF REAR PANEL

Remove three screws ③, and then remove the rear panel ⑤ with TERMINAL board.

Fig. 1-3

1.4 REMOVAL OF BOTTOM COVER

Remove two screws ④, and then detach the bottom cover ⑥.

Fig. 1-4

1.5 REMOVAL OF BOARDS

1. Remove a screw ⑤ from the CHASSIS ④, and then remove the PR board.

Fig. 1-5

2. Remove a screw ⑥ from the CHASSIS ④, and then remove the MOTHER board. The SUB board is connected with the MOTHER board show in Fig. 1-7.

Fig. 1-6

Fig. 1-7

1.6 REPLACEMENT OF CCD IMAGE SENSOR

- The CCD image sensor is not interchangeable with anything other than the specified one.
- Be careful in handling a new image sensor not to leave fingerprints on the glass surface as well as not to make it grease-stained. To clean dust and greasy stain, breathe out to mist the glass surface and gently wipe it with cotton swab, etc. (Do not use alcohol and the like.)
- After replacement of the CCD image sensor, the set needs to undergo electrical adjustment.
- The image sensor has a weak characteristic in electrostatic destruction. When replacing, make sure to electrostatic shielding of the CCD image sensor.
- For a while after removing the image sensor, there are electric charge remaining at the circuit terminals. If a new image sensor is set into the socket in such a condition, it may damage it in a moment because of stored electric charge. When replacing the image sensor, wait a few (2 to 3) minutes after removing it before setting new one into the socket.

● OPTICAL LOW PASS FILTER

The optical low pass filter has no direction of front and behind. Treat carefully that don't stick fingerprints and oils.

● Removal of CCD image sensor

1. Remove two screws ⑦ from the CCD board and remove the CCD board (CCD image sensor is removed with the CCD board).

Fig. 1-8

2. Pull the CCD image sensor out of the CCD board.

● **Installation of new CCD image sensor**

1. When installing a new CCD image sensor, pay attention to its orientation.
2. Install the CCD image sensor as its dent is located in the right side (back focus adjusting screw is located in the left side).

Fig. 1-9

3. Adjust the position of the image sensor's plate while setting it on the CCD board.
4. Reinstall the CCD board with careful attention to the IC socket and pins.

1.7 ATTENTIONAL PERFORMANCE

The following phenomena, that may sometimes occur in operation, are not faulty but resulting from the specifications.

1. The AUTO WHITE BALANCE does not work when the image is unicolor.
2. The design white clip level of this camera is 120%.
3. There may be vertical stripes appearing on borders between different colors.
4. Transversal noise may appear when the camera is used at considerably low temperature.
5. The adjustment procedure of the manual white balance adjustment VR (WHT BAL ADJ VR) is different from that of previous cameras (TK-1070, etc.).
Turning the WHT BAL ADJ VR toward the R side makes the picture color bluish, while turning it toward the B side makes the color reddish.
6. If a metal screwdriver or the like touches the WHT BAL ADJ VR, noise may appear in the picture.
7. Manual white balance adjustment for this camera may slightly come off the most precise position since it is performed only with the WHT BAL ADJ VR.

SECTION 2 ELECTRICAL ADJUSTMENT

This camera has no need of adjustment with variable resistors for respective settings thanks to the function of the EVR (Electric Variable Resistor) incorporated in it. To change the setting of adjustment items, use a personal computer with the adjustment software to change the set value of the EVR for each adjustment item as well as to store the changed data into the memory of the camera.

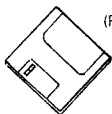

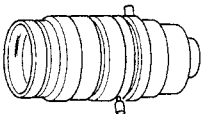

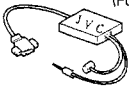

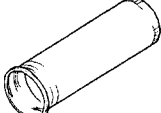

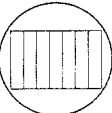

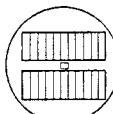

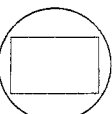

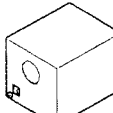

If any of the following parts is replaced or the camera needs to adjust settings of itself such as auto white balance, etc., it requires adjustment of the EVR with a personal computer.

3	Y GAIN
4	NORMAL Y LEVEL
5	COLOR DIFFERENCE BALANCE
6	CARRIER DOTT BALANCE
7	CARRIER BALANCE
8	BURST PHASE (Only PAL model)
9	SC PHASE (Only PAL model)
10	OFFSET DATA
11	INDOOR/OUTDOOR DATA
12	R, B GAIN
13	COLOR DIFFERENCE GAIN
14	COLOR DIFFERENCE MATRIX
15	WHITE LEVEL

Note: Parts that is marked with asterisk (*) are able to get at your side.

2.4 GENERAL SETUP

Hook up the equipment as shown in the figure.

* TK-C601EG is AC 230V supply.

2.5 SWITCH SETTING FOR ADJUSTMENT

• SW301 (TERMINAL BOARD)

WHT. BAL	AUTO
AGC	OFF
BLC	OFF
AES	OFF
LL/INT	INT

• VR301, VR302, VR401 — Mechanical center position.

2.6 PROGRAM EXECUTE

1. Install the MS-DOS MOUSE. COM. (This program can also be used without Mouse.)
2. At the MS-DOS command line, type as follows.
 A>TK-C600 [/N or /P] [B/W] [/COM2] <Enter>
 /N or /P Set type of TV system. The program cannot start without specified.
 N : NTSC
 P : PAL
 /BW Set if the monitor is Black & white.
 /COM2 Set if a serial mouse is connected to the COM1 serial port to allow camera data communicate via COM2. If not specified, COM1 becomes the main communication port automatically.
3. At the "Welcome" message, click <OK> or press [ENTER] key.
 Follow the message appearing on the display to prepare and execute each setting.

SECTION 3 CHARTS AND DIAGRAMS

■ SCHEMATIC DIAGRAM NOTES

● Schematic safety precaution

 Parts are safety related parts.

When replacing them, be sure to use the specified parts.

Voltage and waveform measurements.

Voltage: Measured with digital voltmeter in DC range;
iris closed.

Waveform: Color bars illuminated at more than 4000 lux
at 3200 K lighting.

● Terminal logic

Top bar of terminal name show input or output logic.

Top bar shows, the control circuit become active at negative (low) logic input for example.

● Resistor

NO UNITS : [Ω]

K : [$k\Omega$]

M : [$M\Omega$]

● Capacitor

NO UNITS : [μF]

P : [pF]

● Coil

μH : [μH]

m : [mH]

■ REPLACING SUBMINIATURE "CHIP" PARTS

- Some resistors, shorting jumpers ($0\ \Omega$ resistance), ceramic capacitors, transistors, and diodes are chip parts. These chip parts cannot be reused after they are once removed.

• Soldering cautions:

- 1) Do not apply heat for more than 3 seconds.
- 2) Avoid using a rubbing stroke when soldering.
- 3) Discard removed chips; do not reuse them.
- 4) Supplementary cementing is not required.
- 5) Use care not to scratch or otherwise damage the chips.

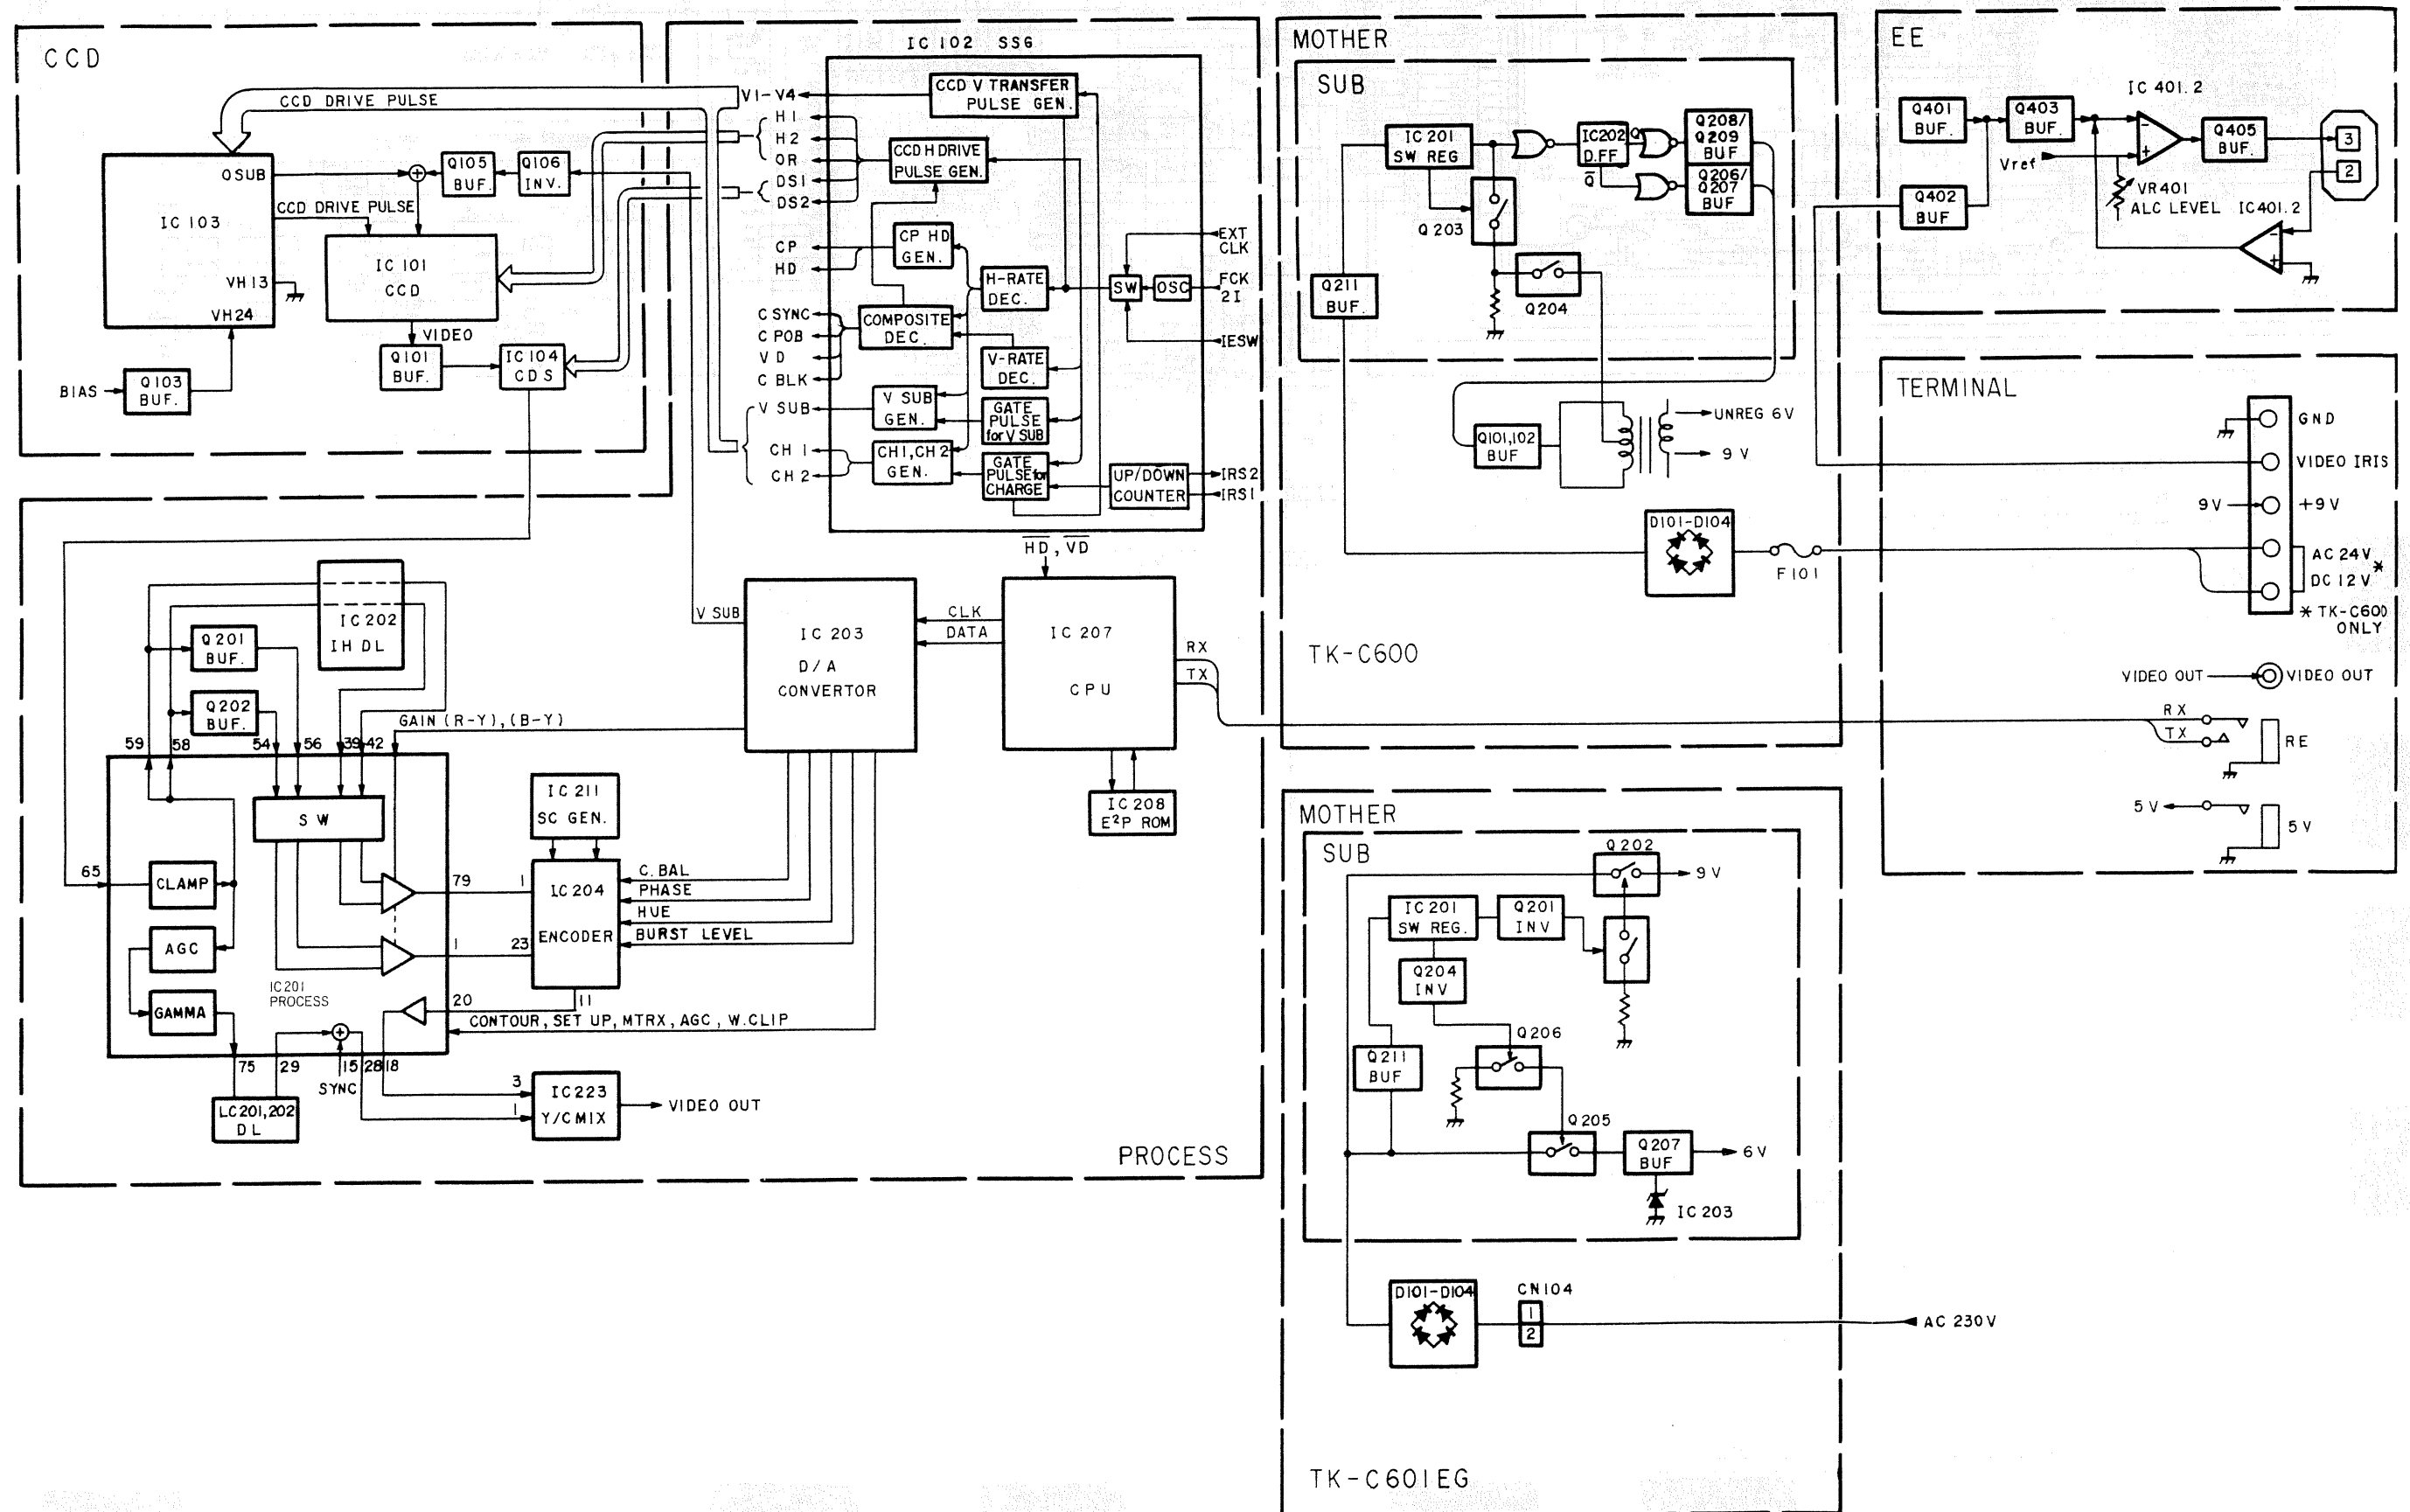

• On Replacing Chip Parts

Use a soldering iron (rated temp.: $260-300^{\circ}C$, 17 W) which is sharp in the tip and high in the insulation.

Notes:

- There are many mini flat ICs used in the camera. When unsolder them and cutting off IC pins to remove them, do the work most carefully not to get the print pattern of the board damaged nor come off.
- When soldering is tried twice or more for the same chip parts, carefully wipe flux dusts off with cloth moistened with absolute alcohol, otherwise the IC may malfunction owing to remaining dusts.

SECTION 5 ELECTRICAL PARTS LIST

SAFETY PRECAUTION:

Parts identified by the Δ symbol are critical for safety. Replace only with specified parts numbers.
For maximum reliability and performance, all other replacement parts should be identical to those specified.

NOTE:

- Parts not denoted by parts numbers are not supplied by JVC.
- Abbreviations in this list are as follows:

RESISTORS

In the "Description" column:

All resistance values are in ohms (Ω).
K expresses kilo-ohm (1 000 ohms, k Ω).
M expresses mega-ohm (10^6 ohms, M Ω).

In the "Parts Name" column:

COMP. RESISTOR : Composition Resistor
U.F. RESISTOR : Non-inflammable Resistor
O.M.F. RESISTOR : Oxide Metalized Film Resistor
FUSI. RESISTOR : Fusible Resistor
M.P. RESISTOR : Metal Plate Resistor
M.G. RESISTOR : Metal Graze Resistor
M.F. RESISTOR : Metal Film Resistor
W.W. RESISTOR : Wire Wound Resistor

CAPACITORS

In the "Description" column:

All capacitance values are in microfarad (μ F) unless otherwise indicated.
P expresses picofarad (10^{-12} farad, pF).

In the "Parts Name" column:

TRIM. CAPACITOR : Trimmer Capacitor
CER. CAPACITOR : Ceramic Capacitor
E. CAPACITOR : Electrolytic Capacitor
TAN. CAPACITOR : Tantalum Capacitor
MPP CAPACITOR : Metalized Polypropylene Capacitor
O.F. CAPACITOR : Oil Film Capacitor
MPF CAPACITOR : Metalized Polyfilm Capacitor
F.M. CAPACITOR : Film Mica Capacitor
P.P. CAPACITOR : Polypropylene Capacitor
P.S. CAPACITOR : Polystyrene Capacitor

Note: In the "Description" column of the parts list, (U) means the parts for the U version while (E) is for the E Version.

Symbol No.	Part No.	Part Name	Description	
IC1	SCV1585-064	I.C.(M)	JVC	(U) ← for U version
	SCV1585-067	I.C.(M)	JVC	(E) ← for E version
